EXPERIENCE

Desenvolvedor Back-end | Bonsae (Current job):

Development and maintenance of web applications using PHP and Laravel.

Responsible for bug fixes, ensuring system stability and continuous quality.

Implementation of new features and functionalities, contributing to product evolution.

Development and integration of microservices to modernize and scale the software architecture.

Development of automations using AI for content generation.

Project :[Read.ED](#)

Designed and developed a full-stack personal online library application

Frontend with React & Next.js; Backend with Node.js, Fastify, Prisma ORM

Implemented Google OAuth authentication; owned architecture, stack selection, and implementation

Project: [FlapBan - Extension University Project](#)

Led backend architecture and development using Laravel REST API and database modeling

Defined tech stack, design patterns, and core libraries for the project

Contributed to frontend development with Next.js/React; delivered a Kanban system for a marketing company

PROFESSIONAL OBJECTIVE

Full-Stack Developer aiming to evolve into the role of **Software Engineer**. My focus is to actively contribute to the **design and definition of system architecture**, leading technical decisions to build scalable, robust, and high-performance solutions.
